

TESTING FOR SEXUALLY TRANSMITTED INFECTIONS

LOCAL RATES OF TESTING LOWER THAN ONTARIO RATES

Grey Bruce residents are less likely than Ontarians to have ever been tested for a sexually transmitted infection (STI).

This is also true of male Grey Bruce residents when compared to male Ontarians.

NOTES:

1. Local estimates for 15 to 17 year-olds were not reported due to small sample sizes, and could not be compared to Ontario. Sexual health indicators are not measured for persons aged 65 and older.
2. Data source: Canadian Community Health Survey, 2015-16

* Interpret with caution due to small sample size. Small sample sizes can cause unreliable estimates.
